DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4, and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Utsu et al. (of record) for reasons of record.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 5-14, and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Utsu et al. (of record) for reasons of record.
5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Utsu et al. (of record) in view of Kleveland (of record) for reasons of record.

Response to Arguments

6. Applicant's arguments filed 8/11/03 have been fully considered but they are not persuasive.

Applicant argues that the "impedance synthesized by the network is the predetermined impedance of the source signal."

Applicant's argument is not commensurate with what is claimed. Applicant's present claims merely state that "an impedance transformer network" "to synthesize the predetermined impedance" which does not require the parallel impedance transformer network portion to be the only means of impedance control as applicant appears to be arguing.

Applicant also argues that the entire matching circuit must be connected in parallel with the source.

This argument is also not commensurate with what is claimed. Applicant's claims merely state that the impedance transformer network is joined in parallel with the source. Clearly the portion 14 of the Utsu impedance matching is connected in parallel (e.g. see Col. 3, lines 51-54).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
